Dr. EUGENE MALLOVE'S INTRODUCTION TO THE CORREAS' VIDEO - "FROM PULSED PLASMA POWER TO THE AETHER MOTOR"

Hello,

I am Eugene Mallove, an engineer by training and experience, a scientist by disposition and profession, and I'm also the editor in chief of Infinite Energy Magazine which is an international magazine dedicated to exploring new forms of energy that are not yet accepted by the scientific establishment – the so-called scientific establishment - simply because these seem to contradict the supposedly sacrosanct models from the 19th and 20th century that science built to explain nature. But it is now the 21st century, and it's time to move on. Let's move on to a more enlightened era, as quickly as possible.

It is my privilege to introduce you to this video, to some very extraordinary science and technology that is being carried out by two exceptional scientists – Dr. Paulo Correa and Alexandra Correa. Since the mid 1970s, they have been working on this project in their entirely self-financed laboratory in the Toronto, Canada area. You may learn more about their work from their website (<http://www.aetherometry.com>).

I have known the Correas since 1996 when I met Dr. Paulo Correa at the Third International Symposium on New Energy in Denver Colorado, at which he gave an astonishing lecture on a new type of energy generation device. This was shortly after the Correas had received several provocative US patents on special electrical discharge tubes which they called pulsed abnormal glow discharge devices or PAGD units. And here are the patents, you can see them yourself [shows copies of US patents] but they can be accessed from information on the Correa website (http://aetherenergy.com/correa_patents.php). In fact, Infinite Energy immediately profiled the Correas and their PAGD work on the cover of Issue #7 ^[1], the March/April 1996 issue of Infinite Energy. Additional reports of the Correa work have followed in Infinite Energy Magazine through 2002. And here's an example of one of the cover articles that we have written about their work [Dr. Mallove shows issue #41 of *Infinite Energy*]. And there will certainly be more coverage of their work along with the work of many other scientists and inventors on the very unappreciated or under appreciated new energy frontier. This area, in general, encompasses such other new energy areas as Low Energy Nuclear Reactions, so-called "cold fusion", vacuum energy and reconsideration of the

Second Law of Thermodynamics.

I must say that the Correas' theoretical and experimental work has advanced considerably since their disclosures in 1996 as you will see in the second part of Dr. Correa's video lecture concerning aether motors. It is my opinion that the Correas' science and technology ranks in quality among the very highest in the new energy field. It is of exemplary completeness, and high level of disclosure and clarity for those willing to take the time to study this extremely rich and provocative body of material.

What you will see, in the first part of this video, for the first time in wide public exposure, is the actual operation of these PAGD tubes as they drive various types of motors through special circuitry which captures robust levels of electrical energy from the very fabric of the so-called 'vacuum state'. Indeed, as engineer-physicist, Dr. Harold Aspden says in his historical introduction to the Correas' work (which follows my comments), this capture of energy from the vacuum is regarded as absolutely impossible by the present widely accepted sciences of electricity, magnetism and electromagnetic energy or electrodynamics. Yet, as Dr. Aspden so correctly explains, there have been very fundamental flaws in the accepted theory of electrodynamics that were introduced almost from the beginning of the theory in the early 19th century. There have been many more important anomalies and puzzles that have been swept under the rug in the untidy house of physics. And, as I have learned by my own study of the published work of thoughtful critics of electromagnetism and relativity, such as the Correas, Dr. Tom Phipps and others, there is every reason to believe that present textbook physics in these areas and in others is not only fundamentally incomplete but, in many ways, is highly flawed and even flat out wrong.

I should note in passing, before Dr. Aspden begins his 20 minute taped discussion from England, that Dr. Aspden was the director in charge of all of IBM's European operations from 1963 to 1983 (Dr. Harold Aspden website: <http://www.aspden.org/>). The Correas fully acknowledge Dr. Aspden's work for its seminal inspiration to some of their own development.

The approximately 1 hour of video about the work of the Correas that follows, titled "From Pulsed Plasma Power to the Aether Motor" was presented at the Innovative Energies Technology Conference of 2002 in Berlin. Be prepared to be taken through an intriguing mixture of scientific explanation, historical background, and to witness, in Part I, the operation of motors being driven by the Correa PAGD tubes, and, in Part II, the operation of Aether motors being driven from various sources. Energy from each output of a PAGD device - by precise measurement of the current and voltage profile over a very short time - is substantially greater than the input energy, often 10 times greater, and even more [2]. The process is 100% repeatable and, in fact, can be made to occur automatically, as an autogenously pulsed, that is, automatic, glow discharge. What is as important, if not more important than examining each pulse, is the fact that various ways have been developed to show that the gross electrical output of the PAGD device exceeds input electrical energy when the PAGD tube and associated circuitry are employed to charge up batteries or to drive certain types of electrical motors.

I have been to the Correa laboratory in the Toronto area, several times, beginning in August 2000 and I have observed the multiple ways in which PAGD output and input power has been measured, battery charging and discharging, data acquisition system voltage and current capture, oscillographic measurement and motor output calibration and modeling. I am satisfied that the

Correa PAGD devices most definitely have an overunity characteristic. And I am convinced that the Correa PAGD science and technology is of extremely critical importance to our energy future. The difficulties that have been encountered in acquiring R&D support for this exemplary research have been described by Dr. Correa in public lectures and in articles that have appeared in *Infinite Energy* and on the Correa website (<http://www.aetherometry.com>).

In Part II of the video lecture, Dr. Correa introduces a perhaps even more remarkable type of power generation, presumptively coming from what can only be described as an energetic aether. This aether is not a static, luminiferous aether, the electromagnetic aether of the 19th, which was indeed ruled out by such experiments as the Michelson-Morley interferometer measurements in the 1880s. But, rather, it is a dynamic energetic aether that apparently pervades the universe if the Correa experimental work is accepted for what it most certainly seems to show, along with my personal witnessing of it since August 2000. There have been other witnesses of the Correa experiments, some of which have written comments that can be found on this DVD – including my own - in computer accessible format.

In 1998, the Correas evidently made a dramatic breakthrough in decoding aether physics. Building on earlier experimental work by Nikola Tesla and later work by Dr. Wilhelm Reich, both of whom worked in the United States, the Correas in Canada discovered how to make electronic circuitry that is able to power special types of electric motors – spinner motors – by capturing and transforming components of aether energy into the energy of electrons moving in the final stages of the circuitry. The Correas have filed for patent protection on these aether motor concepts [3]. I am pleased to introduce to you the first ever video footage of these aether motors in operation.

The sources of the aether energy – according to the experiments that are portrayed in the video – range from special Faraday cage accumulators, called ORACs (after Reich's terminology), to the body of the earth itself, to evacuated Vacor tubes, and most astonishing, to the human body. Since I have personally witnessed these experiments – and much more yet to be disclosed from the fruits of the Correas' labours – I am in a position to testify to the integrity of these most shocking, truly mind-boggling experiments. Of course, no video presentation by the Correas, or testimonial by me or others can prove to an appropriately skeptical witness that these demonstrations are legitimate. This video presentation can best serve to provoke the curiosity of the scientifically, technologically and environmentally-minded observers in the video audience. That is the intent of this DVD. And you can see some of their work, some of the monographs that are available on their website, and I have collected even more of them, downloading them in pdf format. You can see various volumes, very thick and extensive materials from aetherometry.com.

But I do make this representation to those who will witness the Correa video lecture: from my many years of interaction with the Correas, I have found their integrity to be absolutely beyond reproach. I've examined the innards of their small, aether motor electronics bay-enclosures for inappropriate energy storage devices, such as batteries, and I have found no trickery. I am essentially 100% certain that there is no deliberate fraud or misrepresentation in their work.

Furthermore, in reading their *Aetherometry* monographs, and examining some of the experiments outlined therein, it is quite clear that they are pioneering some of the most interesting, well-integrated and important scientific work on this planet. It seems to connect physics, chemistry, biology, atmospheric science, astronomy and cosmology in a most intimate and surprising way. Only

time will tell how much of this scientific work will be confirmed by others. That is the process of science - and they have published work that can be repeated. But for now, I am committed to doing everything in my power to help introduce the Correas' science and technology to the world.

Thank you and enjoy the program. I now turn you over to Dr. Harold Aspden in England, followed by the Correas' video 'From Pulsed Plasma Power to the Aether Motor'. Again, enjoy the presentation. Thank you.

EDITORIAL NOTES

[1] This was Dr. Mallove's preferred IE cover, and he had it blown up to 2*3ft, and placed behind his large desk in his office.

[2] Technically speaking, Dr. Mallove means "power", not "energy".

[3] Two patents (texts found at: <http://aetherometry.com/Patents/US7053576.pdf>; <http://aetherometry.com/Patents/US7235945.pdf>) would be granted by the USPTO to the Correas in 2006 and 2007, well after the murder of Dr. Mallove, who never had the chance to savour this achievement.
